

Chapter 117

Data List

Introduction

This procedure generates a report of the data of a dataset. One use is to maintain a printed copy of your data.

Data Structure

The procedure outputs the rows of selected columns.

Example 1 – Creating a Data List from a Dataset

This section presents an example of how to create a list of variables from a database. Data from the Resale dataset will be used to generate the sample report.

Setup

To run this example, complete the following steps:

1 Open the Resale example dataset

- From the File menu of the NCSS Data window, select **Open Example Data**.
- Select **Resale** and click **OK**.

2 Specify the Data List procedure options

- Find and open the **Data List** procedure using the menus or the Procedure Navigator.
- The settings for this example are listed below and are stored in the **Example 1** settings file. To load these settings to the procedure window, click **Open Example Settings File** in the Help Center or File menu.

Variables Tab

Data Variables **State-City,Price-Bathrooms**

Report Options (*in the Toolbar*)

Variable Labels **Column Names**

Data Labels..... **Data Values**

3 Run the procedure

- Click the **Run** button to perform the calculations and generate the output.

Data List Section

Data List Section						
Row	State	City	Price	Year	Bedrooms	Bathrooms
1	Nev	2	260000	1972	2	2.5
2	Nev	2	66900	1942	3	2.5
3	Vir	4	127900	1975	2	2
4	Nev	1	181900	1984	3	2.5
5	Nev	2	262100	1970	2	2.5
6	Nev	1	147500	1986	2	2.5
7	Nev	2	167200	1987	2	2
.
